

Description

This app provides an easy way to define and manage your individual tool boxes and tools.

You can name each drawer in larger tool boxes and can list each tool. These are all editable by you, at any time. The order can be changed to suit your needs, keep track of to whom and when you lend a tool or when it is returned, and move tools between tool boxes or drawers to manage your tool inventory. A tool log of these actions is created automatically for your reference and review.

You can share the tool lists with friends, colleagues and others or simply just provide a record of the current state of the tools and tool boxes.

What's New

Minor code changes to fix button bar size in new iOS.
Otherwise, all the same features.
